Just at 1826 Crisler is a low point that directs into a water drainage culvert that connects directly to the top of Marmont Avenue 250 feet below.

Photo from today at end of Culvert / Top of Marmont with GrandView / Crisler directly above

In 2016 at the old water tower site at 8420 GrandView( less than a block away) there was a huge mud flow from the site all the way down to Hillside Avenue that continued on all the way to Sunset Blvd.

See photos below for the extent and depth of the inundation.

No one has been able to fix the Hillside and it now remains permanently hazardous.

A similar flow to Marmont would be devastating.

It will only take a good rainstorm while under construction for this to happen.
